

Job Search with Claude Cowork — Daily Cheat Sheet

v0.5 · Event-sourced tracker + reality check + profile audit + look-alike analysis · Print and keep at your desk

HOW IT WORKS · DAILY RHYTHM

Events is the source of truth (append-only). Applications is a state view derived from it. Every action writes an Event. Lose Applications → rebuild from Events. Lose Events → lose history.

Daily flow: 7 AM discovery runs auto · morning check Dashboard + triage **Found** rows · prepare 3-5 apps · review tabs + submit yourself · evening Gmail sweep updates statuses.

RECURRING COMMANDS (USE DAILY / WEEKLY)

1. RUN DISCOVERY NOW

Run my daily job search. Run all active Saved Searches against listed boards via Chrome. Score, dedupe, write new rows + Discovery Found events. Write a snapshot per search/board to Market Snapshots.

2. PREPARE APPLICATIONS

Take the top 5 Found rows. Open each in Chrome, fill from my job-profile, draft a tailored cover letter. Stop before Submit. Set status to Drafted, write Status Changed events, save app URLs in Notes.

3. CHECK FOR CONNECTIONS

For any Drafted/Submitted row, check LinkedIn for 1st-degree connections at the company. Draft referral DMs in the compose window. Do not send. Write Outreach Drafted events.

4. DAILY SUMMARY

Summarize my pipeline from Dashboard. Counts, anything Drafted >3 days, Submitted >14 biz days silent, interviews this week.

5. EMAIL SWEEP

Check Gmail for ATS confirmations, recruiter replies, interview invites, rejections from last 24 hours. Write Email Received events. Update status when unambiguous; flag ambiguous ones.

6. REALITY CHECK (WEEKLY)

Run a reality check on my searches. Use reality-check skill. Flag unrealistic configs, profile mismatches, or stuck patterns. Suggest pivots where data supports. Write a Reality Check event.

OCCASIONAL COMMANDS (MONTHLY / QUARTERLY)

7. MARKET TREND CHECK

Show market trend for [search name] over last 8 weeks. Plot weekly Total Results, compute slope, name top employers + strongest source.

8. REPLAY HISTORY

Replay history of [Company]. Pull all Events for the App ID sorted by Timestamp. Render as a timeline.

9. PROFILE AUDIT (QUARTERLY)

Audit my LinkedIn and résumé via the profile-audit skill. Grade by category, flag red flags (especially "currently unemployed" signaling), produce a prioritized fix list. If I have a gap, recommend specific consulting paths I could legitimately start. Write a Note Added event.

10. LOOK-ALIKE ANALYSIS (PER ROLE, REFRESH ~6MO)

Run a look-alike analysis on my target role via the look-alike-analysis skill. Sample 12-20 LinkedIn profiles of people who recently got the role (bias to 6-24 months in role). Identify patterns appearing in 60%+ of sample – skills, certs, headline structure, About conventions, career path. Anonymize subjects. Output a gap analysis: what I have vs. what's common. Log to Look-Alike Analysis tab. Write a Look-Alike Analysis event.

NEVER LET CLAUDE DO THIS

- Click Submit, Send, or Confirm on any application or message — **ever**.
- Send a LinkedIn message or email without you reviewing and pressing Send.
- Modify a past Event row. Events are immutable. Wrong event → write a corrective event, never edit.
- Update Applications.Status without writing a Status Changed event. The Dashboard breaks if this happens.
- Delete rows from Events. The history is the system.
- Use credentials for banking, brokerage, or healthcare apps. Block these in Cowork settings.
- Bypass a captcha or login wall. If it hits one, it pauses. That's correct.
- Guess at EEO / work auth / sponsorship answers. If profile is blank, it asks.

TRACKER TABS

Tab	What it is
Applications	One row per posting. Current state. <i>Derived from Events</i> .
Events	Source of truth. Every action. Append-only. Never delete .
Market Snapshots	Per-search-per-day stats. Drives trend queries.
Saved Searches	Discovery configuration. Edit to add/disable searches.
Look-Alike Analysis	Log of profile-pattern studies. Subjects anonymized.
Dashboard	Status counts, activity metrics, recent events. Read-only.
Profile Quick Ref	Optional cache of profile fields. Source is the skill.

STATUS LEGEND

Found	Discovery surfaced it; not yet touched	Interview	Invitation or schedule on calendar
Drafted	Form filled, awaiting your review	Offer	Offer extended
Submitted	You clicked Submit	Rejected	Explicit no
Acknowledged	ATS confirmation received	Ghosted	30 biz days silent
		Archived	You discarded it

TROUBLESHOOTING

- **Applications.Status doesn't match latest Status Changed event.** Drift. Ask Cowork: "Rebuild Applications status column from Events." Don't manually patch.
- **Last Event Date column is blank.** The MAXIFS formula can't find any events for that App ID. Likely a missing Discovery Found event — add one with a backdated timestamp + note "Reconstructed from Applications row."
- **Hit a Pro usage limit.** Pro caps come fast when Chrome is running. Wait for reset, or upgrade to Max for heavy weeks. Run discovery-only sessions (no form-fills) on tight days.
- **Cowork can't see Chrome.** Re-pair Claude in Chrome from Cowork → Settings → Connectors.
- **Tracker has duplicate Applications rows.** Ask Cowork: "Dedupe Applications by Posting URL. Merge sources. Write a Manual Edit event for each merge."
- **Cover letters sound robotic.** Edit the cover-letter skill. Add 2-3 of your real letters as examples.
- **An ATS broke mid-fill.** Status stays Found, NOT Drafted. A Note Added event is written. Come back manually.
